6. Title of proposed action: Valley Asphalt, Incorporated - Lehi Project, M/049/031			
7. Description: During Operations: The limestone will be drilled, blasted and transported to the processing plant area, where it will be crushed and screened for various products. Product will be trucked from the stockpiles to various job sites or conveyed to the asphalt plant where it will be injected with asphalt oil and mixed with aggregate to produce asphaltic concrete and then loaded on trucks and hauled to various job sites. Topsoil will be salvaged prior to mining and stockpiled for reclamation. A sediment pond will be used to control runoff from disturbed areas. Public safety will be insured by restricting access with fencing and signs. Trash and debris will be periodically hauled to a landfill. After Operations: All facilities will be demolished and removed. The disturbed area will be regraded and topsoil replaced. The final surface will be left in a roughened condition to promote vegetation establishment. The area will be fertilized and seeded with species that were selected to achieve the post mining land uses of grazing and wildlife habitat. All areas will be revegetated with the exception of the final highwall area (about 24 acres) for which a variance has been granted. The final highwall area will be fenced and warning signs installed to protect the public.
